

# Air Ambulance

there in a heartbeat

**PRINCELY JETS**  
(Private) Limited *It's about time*  
UAN: 111-000-062 [www.princelyjets.com](http://www.princelyjets.com)

**“Princely Jets”** launches for the first time in Pakistan, a dedicated, fully equipped Air Ambulance Service. We use **BO-105 Twin Engine Helicopters**, with **on board paramedics**.

## Who we are

Princely Air Ambulance provides medical emergency transport services in the country starting from its initial base from Quaid-e-Azam Airport, Karachi, operating with the BO-105 Twin Engine Helicopters covering a radius of 225 mi. The service is available round the clock seven days a week. Skilled medical staff extends care and consideration while transporting patients to a nearby hospital or airport for outbound flights.

The flight crew is supported 24/7 by the Flight Dispatch Center that focuses on the smooth, safe and efficient transfer of patients.

## What we do

We are able to provide our customer with high quality, extensive medical care in critical situations. We have a dedicated and professional crew, which has been trained to take you to a suitable hospital in the shortest time possible.

In a medical emergency or injury, the first hour is most crucial. Life and death situations are dependant on how fast one can reach a hospital. The Air Ambulance transports you within that critical time period, greatly improving the chances of saving a life with successful medical aid.

Our helicopters are equipped with technologically advanced Life Port Equipment and the medical staff on board has been trained to be skilled in treatment of burns, cardiac, respiratory problems, trauma and other emergencies.

Working along with emergency services, customer, referring hospitals and physicians, the Air Ambulance flight coordinators provide directions and patient information to flight teams en route to the destination for overall optimum results.

## The Ideal Chopper for the Job

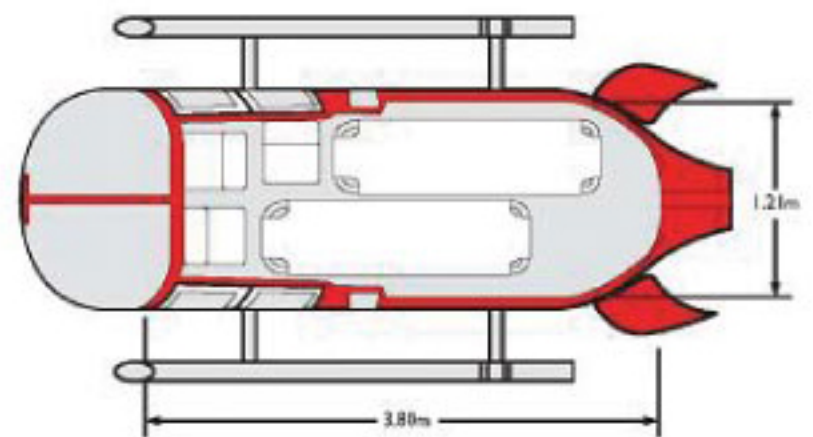

The BO-105 is an ideal helicopter for rescue missions. It is the most preferred chopper for emergency evacuations and timely rescues. Having a capacity of two patients at a time, the skid undercarriage provides minimum movement of the patient once on a stretcher. The Air Ambulance rescue team includes two paramedic attendants, who are present on board at all times. Along with this, the BO-105 has a high ground clearance with twin engine safety and high/protected tail rotor system. Separations between the pilot and patient make it easier for the patient to relax. The Air Ambulance offers you serviceability through reliability.

### Helicopter Specifications

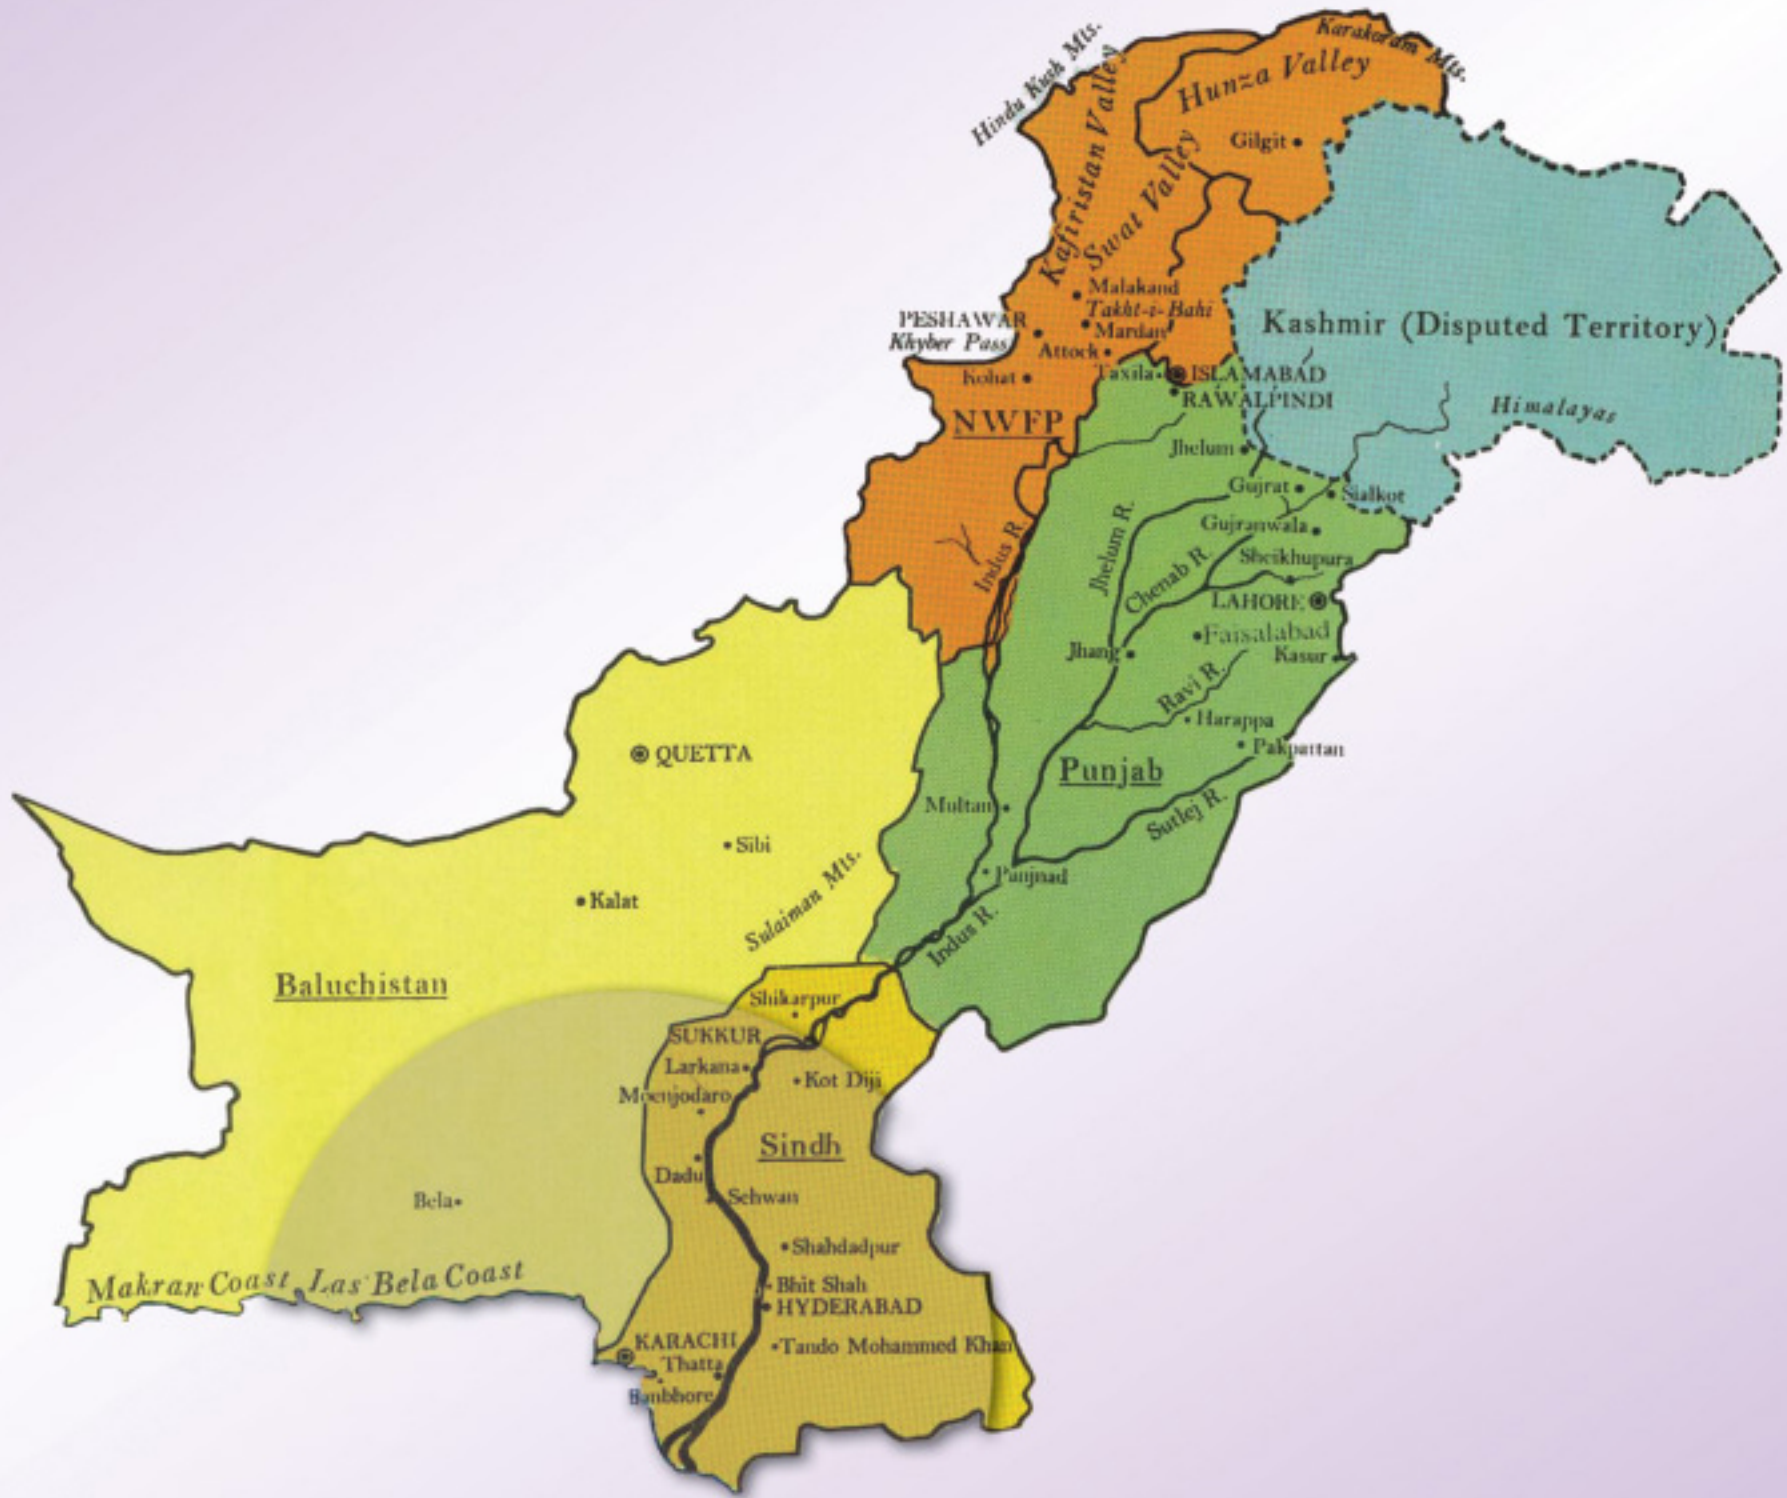

- Engine Type – 2x Allison 250-C20 B
- Normal Cruise Speed – 120 knots
- Max Range – 245 nautical miles
- Stretcher Capacity – 2 patients
- Medical Attendant Seating – 2
- Max Seating Capacity – 5 persons

### Medical Equipment - Features

- 2 Patient Stretchers – primary and secondary
- Medical escort seating available
- Medical bulkhead includes:
  - LIFEPAK with Cardiac Monitor and Defibrillator
  - MRI ENVIRONMENT Automatic Transport Ventilator
  - Oxygen Therapy Kit
  - Vital Signs Monitor
  - Aspiration Unit
- Medical Cabinets – containing consumables
- Miniature Drug Store – life saving drugs
